DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 21-24 and 33-36, drawn to a method of reforming hydrogen rich gas, classified in class 48, subclass 127.9.
- II. Claims 1-20, 25-29, 30-32, 37-49, drawn to an apparatus for generating hydrogen rich reformat from hydrocarbon feed, classified in class 422, subclass 188.

2. The inventions are distinct for the following reasons:

Inventions I & II are a method and apparatus for its practice. The inventions are distinct if it can be shown that (1) the method claimed can be practiced by another materially different apparatus or the apparatus as claimed can be used to practice another materially different method. See MPEP 806.05(e). In this case, the method may be practiced by an other reforming apparatus having a plurality of reaction zones in a different configuration.

The inventions are distinct for the reasons given above and have acquired separate status in the art by their classification. Furthermore, the search required for Group II would not be required for Group I, thus restriction for examination purposes as indicated is proper.

3. Once the applicant elects of the above indicated inventions, a further restriction to a patently distinct species, as set forth below is required:

Species a-1 is a reactor for generating hydrogen enriched reformat wherein feedstock/steam is heated in a zone between a core reaction zone and high temperature shift bed, and a partial oxidation section is adjacent the autothermal reformer, for example in Fig. 1.

Species a-2 is a reactor for generating hydrogen enriched reformat with tubes surrounding the autothermal reactor for preheating fuel/steam mixture without a partial oxidation section, for example in Fig. 4.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which claims shall be restricted if no generic claim is finally held allowable. Currently none of the claims appears generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement and a listing of all claims readable thereon. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by a restriction.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.1 41 . If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the

Art Unit: 1764

case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Due to complexity of the above restriction requirement, no telephone call was made to request an oral election. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed. 37 CFR 1.143.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1,17(i).
